SPECIAL NOTICES.

The Railway Companies occasionally charge carriage on our "Carriage paid" packages. If our customers will kindly pay all such demands, and forward to us the receipt, we shall recover the money.

Orders amounting to 21s. and upwards sent, Carriage Paid, to any railway station in England and Wales; to Edinburgh, Glasgow, or any intermediate station; also to Dublin, Cork, Limerick, Belfast, Newry, and any other Town on the Irish Coast, having direct steam-boat communication with London.

FIVE PER CENT. allowed on all payments made within one month from date of Invoice.

NO CHARGE MADE FOR PACKING OR PACKAGES EXCEPT IN THE CASE OF PLANTS, WHEN A SMALL CHARGE IS MADE FOR THE MAT OR HAMPER, AND IF RETURNED, HALF-PRICE IS ALLOWED.

Post-office Orders to be made payable at King-street Post-office, Covent-garden, W.C. All Cheques to be crossed "The Union Bank of London." Any amount may be paid in Postage-stamps.

Those with whom we have not previously had business transactions are respectfully requested to send with their order a REMITTANCE or a LONDON REFERENCE. All Foreign and Colonial orders, to ensure attention, must be accompanied with a remittance.

In giving orders, it is only necessary to fill up the accompanying Order Sheet.

It would very greatly facilitate the dispatch of business, if on EACH order the NAME and ADDRESS were written **DISTINCTLY**, and in **FULL**, and the most direct route by steam-boat or railway stated.

We do not publish a Plant List, but shall be happy to quote prices of the following

PLANTS.

FRUIT TREES, Pyramidals, Dwarf or Standards.
VINES, in Pots.

ROSES, Dwarfs, Standards or in Pots.

CLIMBERS.

HERBACEOUS PLANTS, in Pots, 9s. and 12s. per doz.

ALPINE AND ROCK PLANTS, in Pots, 100 in 50 varieties, 70s.; 50 in 50 varieties, 40s.; 25 in 25 varieties, 21s.; 12 in 12 varieties, 12s.

HARDY BRITISH FERNS, in Pots, 12s. to 18s. per dozen.

GREENHOUSE FERNS, suitable for Plant Cases, &c., 18s. to 30s. per dozen.

SWEET SCENTED VIOLETS, 18 in 18 varieties, Half Double and Half Single, including the two finest Violets known—"The Czar" and "Reines des Violets," the collection, 15s.

VIOLA CORNUTA, a beautiful blue summer-flowering plant, 9s. per dozen.

OUR SPRING GARDENS, AND HOW TO HAVE THEM ATTRACTIVE FROM JANUARY TO JUNE.

WHEN Winter first yields to the advances of gentle Spring, irresistible in her grace and loveliness, how eagerly do we look for the first signs of returning life and beauty in the wee timid flower that seems born of the snow; in the pale Primrose, emerging in the copse from the leaves which Autumn and Winter had strewn as trophies of decay; in the Cowslip, sweetening the meads, and the Blue Bells, decking the wayside banks with grace. These have a charm all their own, by reason both of their native delicacy and of the season at which they disclose their beauties to our gaze. But why should we not have the same delight in our own gardens, or suffer the desolation of Winter to linger there, when nature has cast it away and has already put on her vesture of delight? Give, if you will, the place of honour to the rich masses of colour and gorgeous display of full-bloomed beauty, in which the Summer garden proudly vaunts itself—the glow of the Rose—the brilliant scarlets of the Geranium, set off by its abundant leafage—the dazzling tint of the Verbenas—the many-coloured spikes of the Gladioli—the stately growth of the Hollyhocks, and the thousand other flowers that offer themselves in aid of our desire to make our parterres gay and attractive amidst the glories of Summer. But there is not the least reason why the earlier months of the year should not see the garden rejoicing in beauties quite as charming; some delightful in their modest delicacy—some striking in their brilliance—not yielding one whit to their more gaudy successors in their power to please. What can be more charming than the Snowdrop, set off by the Golden Aconite; or more effective than the many-coloured Crocus, in the endless groups and patterns which taste and fancy may devise. Even the humble Daisy may most effectively serve to make the borders gay, while the Pansy adds its rich profusion to the scene, to say nothing of the pretty Scilla Siberica, the Hepaticas, the exquisite Forget-me-not, which now plays so prominent a part in Spring gardening, the Anemone, Polyanthus, and Ranunculus. Where, in the whole range of Flora's gifts, will be found anything more delicious than the Hyacinth, more striking than the Narcissus, more rich and stately than the Iris, more superb than the Tulip. It is astonishing that any one who enjoys the pleasures of a garden at all should omit to avail himself of the facilities offered for floral decoration during the early Spring months; and, indeed, it can only be accounted for by supposing that fortune has not given him the opportunity of seeing what marvellous effects may be produced in a Spring Flower Garden. The most successful illustration of Spring gardening that has come under our notice, is at Cliveden, the seat of the Dowager Duchess of Sutherland. The Flower Gardens there, although of large extent, are as full of bloom during the Spring months as during the Summer and Autumn; so that any one seeing them in their Spring beauty would hardly be contented to have his garden bare and desolate during six months of the year, as is too frequently the case at present. Mr. Fleming, the skilful and indefatigable superintendent of the gardens at Cliveden, has published a small volume, entitled, "Spring Gardening, by J. Fleming," price 2s. 6d. This gives lists of the plants used at Cliveden, the time at which they bloom, their culture and propagation, and a detailed account of how the beds at Cliveden were filled for two years.

As many of our customers may not have Mr. Fleming's book to refer to, we offer to such a few suggestions as to the most effective arrangements for beds and borders, whether on a large or small scale, with plants and bulbs best calculated to maintain a continuous succession from the first appearance of Spring till June.

HYACINTH BEDS.

- No. 1 Bed.—Plant with Hyacinths, either mixed (Nos. 99 to 104) or in circles, lines or masses, in distinct colours (Nos. 67 to 98), edge with a line of Dog-tooth Violets, and then a line of Yellow Pansy. The Hyacinths may be intersected with groups of Crocus or Snowdrops.
- No. 2 Bed.—Plant with Red Hyacinths, intersect these with Blue Forget-me-not, and edge the bed with Single Red Hepatica, or Red Daisy.
- No. 3 Bed.—Plant with Blue Hyacinths, intersect these with White Forget-me-not, and edge the bed with variegated Arabis mollis.
- No. 4 Bed.—Plant with White Hyacinths, intersect these with Pink Silene, and edge with Single Blue Hepatica, or Blue or Purple Pansy.
- No. 5 Bed (Square).—Formed into diamonds with Arabis variegata, the diamonds filled in with Hyacinths.

TULIP BEDS.

- No. 6 Bed.—Plant with Early Single Tulips, either mixed or in circles, lines, or masses of distinct colours, intersect the bulbs with Myosotis, Silene, or Crocus, and edge with the lovely Scilla Siberica, or a good self-coloured Crocus.
- No. 7 Bed.—Plant with a good Scarlet Early Single Tulip, as Scarlet Duc Van Thol or Vermilion Brilliant, intersect the bulbs with Yellow Pansy or Yellow Crocus, and edge with Snowdrops.
- No. 8 Bed.—Plant with Golden Prince Early Single Tulip, intersect these with White Forget-me-not or Scilla Siberica, and edge with Purple Pansy.
- No. 9 Bed.—Plant with White Pottebakker Early Single Tulip, intersect with Blue Forget-me-not, and edge with Yellow Pansy, surrounded with a line of Red Daisy.
- No. 10 Bed (Oblong).—Plant Early Single Tulips in geometrical figures, the lines planted with Tournesol Double Tulip (No. 559) and the figures filled in with distinct coloured Early Single Tulips, these intersected, so as to cover the ground, with Blue Forget-me-not, and edged with Yellow Pansy.
- No. 11 Bed.—Plant with Standard of Perfection Early Single Tulip, a beautiful variegated variety, intersect it with Blue Pansy, and edge with Red Daisy, or intersect with Blue Forget-me-not, and edge with Red Daisy.

- No. 12 Bed.—Plant with *Gesneriana* Tulip, scarlet with blue centre, intersect with the Dark Italian Wallflower, and edge with *Alyssum Saxatile* Compacta.
- No. 13 Bed.—Plant with Double Tulips, either mixed or in circles, lines, or masses of distinct colours, intersect the bulbs with *Myosotis*, *Silene*, or *Crocus*, and edge with Blue, Purple, or Yellow Pansy.
- No. 14 Bed.—Plant with *Rex Rubrorum* Double Scarlet Tulip, intersect it with Yellow Pansy or Yellow *Crocus*, and edge with White Daisy or Snowdrops.
- No. 15 Bed.—Plant with *La Candeur* Double White Tulip, intersect it with Blue *Myosotis*, and edge with Red Daisy, or Dogs-tooth Violet.
- No. 16 Bed.—Plant with Yellow-rose Double Yellow Tulip, intersect it with White *Myosotis*, and edge with Blue Pansy.
- No. 17 Bed.—Plant with Double *Tournesol* Tulip, intersect with *Collinsia verna*, and edge with White Daisy.
- No. 18 Bed.—Plant with *Couronne de Pourpre* Double Velvety-crimson Tulip, intersect with Yellow Italian Wallflower, and edge with Hen-and-Chicken Daisy.
- No. 19 Bed (Square).—Formed into diamonds with *Stachys lanata*, the diamonds filled in with Tulips.

CROCUS BEDS.

- No. 20 Bed.—Plant with *Crocus*, distinct varieties. If a circular bed, plant strong lines of Yellow *Crocus*, radiating from the centre to the circumference, and fill in the spaces with white, purple, and striped varieties, and edge with Snowdrops or Winter Aconites; if the bed is square, or any other form, it may still be divided as suggested, or varied according to the taste of the cultivator. The *Crocus* will bloom very early; therefore, to prolong the beauty of the bed, intermix Pansies, blue, purple, yellow, and white, each colour distinct.
- No. 21 Bed (Square).—Formed into diamonds with *Arabis lucida* variegata, the diamonds filled in with *Crocus*.

ANEMONE BEDS.

- No. 22 Bed.—Plant with Single Anemones, either mixed or scarlet, and edge with *Scilla Siberica*. This bed will most likely be in beauty in February, and continue a considerable time. If *Silene* be planted with these, a display will be maintained until June.
- No. 23 Bed.—Plant with Double Anemones, either in colours or mixed: the scarlet variety of itself makes a glorious bed; or it may be used for separating the other colours, as we have recommended the Yellow *Crocus* in No. 18 Bed; or the colours may range in circles or masses. To prolong the beauty of the bed until June, intersect the Anemones with *Saponaria* or *Limnantes*, and edge with Blue or Purple Pansy, or Yellow *Crocus*.

RANUNCULUS BEDS.

- No. 24 Bed.—Plant with Turban *Ranunculus*, mixed or in distinct colours, as recommended for Anemones, giving the scarlet the more prominent position. To prolong the beauty of the bed until June, intersect it with Daisies, and edge with *Arabis mollis* variegata.
- No. 25 Bed.—Plant with Scarlet Turban *Ranunculus*, intersect with White Daisy, and edge with Winter Aconite.

NARCISSUS BEDS.

- No. 26 Bed.—Plant with *Polyanthus* *Narcissus*; intersect these with Primroses, *Polyanthus*, or Cowslips; and edge with the variegated *Arabis mollis*, or the beautiful *Narcissus Bulbocodium*.
- No. 27 Bed.—Plant with *Narcissus Poeticus*, intersect with *Collinsia grandiflora*, and edge with *Phlox frondosa*.
- No. 28 Bed.—Plant with *Narcissus albus plenus odoratus*, intersect with Pink *Silene*, and edge with Grape Hyacinth.
- No. 29 Bed.—Plant with *Iris Persica*, intersect with *Arabis mollis* variegata or *Arabis lucida* variegata and with circles of *Scilla Siberica*.

PLANT BED.

- No. 30 Bed.—If circular, plant the centre with Blue Forget-me-not; then divide the remainder of the bed into triangles, the lines consisting of a double row of White Daisies, and the triangles filled in with the Pink and Red Daisy, the Purple, Yellow, and Blue Pansy; with a broad edging of *Arabis mollis* variegata, or *Arabis lucida* variegata. This bed may be arranged in twenty different ways.

 The foregoing beds may be modified in the arrangement of colours, and also by omitting the intersections; we would, however, in all cases recommend that the beds have a good edging, and nothing is more telling than Yellow *Crocus* for this purpose.

- No. 31.—A few hints on a Spring border may be acceptable. If the border is of considerable extent and well situated, it is, perhaps, more effective and pleasing than beds. Plant the back line with *Polyanthus* *Narcissus* thus: . . ., and the following in the same manner:—2nd line, *Rex Rubrorum*, Double, Scarlet Tulip; 3rd line, *La Candeur*, Double White Tulip; 4th line, Hyacinths in three colours; 5th line, Double Scarlet Anemone; 6th line, Yellow Turban *Ranunculus*; 7th line, Snowdrops; 8th line, Winter Aconites; 9th line, Dogs-tooth Violets. As these will not all bloom at the same time, fill in between the lines in the following order: 1st, Blue Forget-me-not; 2nd, Yellow Pansy; 3rd, Purple Pansy; 4th, Blue Pansy; 5th, Magpie Pansy; 6th, Pink *Silene*; 7th, White Daisy. The Winter Aconite and Dogs-tooth Violet, if planted close together, when done blooming their foliage will form a good edging. This border may be arranged in a great variety of ways; for instance, Italian Wall-flower might be introduced, besides many other early flower-plants.

The following Plants, in combination with Bulbs, are extensively used in the celebrated Spring Gardens at Cliveden :—

	Per doz	—s.	d.
The Cliveden Pink Daisy, for edging or small beds	3	0	0
" Red	3	0	0
" White	3	0	0
" Daisy, with leaves beautifully variegated green and gold	6	0	0
" Blue Forget-me-not (<i>M. Sylvatica</i>), for edgings or for filling large and small beds	1	6	0
" White	1	6	0
" Perpetual-flowering Blue Pansy, for edgings or large and small beds	4	0	0
" " Magpie Pansy, for edgings	6	0	0
" " Rich Purple Pansy, for edgings or large and small beds	4	0	0
" " Fine Yellow Pansy,	4	0	0
" Polyanthus, mixed, for edgings or for filling large and small beds	3	0	0
" Silene, Pink	1	6	0
" " White	1	6	0
" Yellow Italian Single Wallflower, for filling large and small beds	4	0	0
" Dark Red	4	0	0

" White,	1	6	0
Variegated Arabis mollis, for edgings	3	6	0
" " lucida	6/	and	9 0
Stachys lanata, large silvery foliage, fine for edging large beds	3	6	0
Cerastium tomentosum, small silvery foliage, fine dwarf edging	3	6	0
Hepatica, Single Blue	6/	and	8 0
" " Red	6/	and	8 0
Myosotis Sylvatica, Cliveden blue Forget-me-not seed, 2s. 6d. per oz., 21s. per lb.			

The following Notes on the Cultivation of Bulbs have been extracted from our
"Illustrated Floral Guide":

THE HYACINTH.

The cultivation of the Hyacinth in water became fashionable in England about the year 1734. Since then its charming flowers, delightful fragrance, and easy culture, have secured for it the most favoured place among our winter and spring blooming plants.

In the conservatory or sitting-room it is equally at home, and its well-being is less dependent upon the mysteries of the gardening art, or the pure atmosphere of the country, than that of almost any other plant in cultivation.

TIME OF PLANTING THE HYACINTH.

This must, to a considerable extent, be regulated by circumstances. Nature has undoubtedly declared herself in favour of planting the Hyacinth in October and November; yet, without disputing her authority, we would say to the lovers of this flower, make your first planting as near the 1st of September as possible, and your last about the 31st of December.

After the early part of December, Hyacinths intended to bloom in glasses would flower better if first planted in pots, and there allowed to remain till half grown, or even in bloom.

TIME OF PURCHASING THE HYACINTH.

This information is as important to the purchaser as any we can give. The first selection of Hyacinths arrive in London from the 20th of August to the 5th of September; orders should therefore be given for these as soon after that time as possible. If it be inconvenient to plant them immediately, they may be placed on a cool dry shelf till wanted.

TO SUCCESSFULLY DEVELOPE HYACINTH FLOWERS.

Light and fresh air are the great essentials—the former gives colour to the flower, the latter imparts health and vigour to the plant. The Hyacinth should, therefore, when in growth, be placed in the lightest situation at command, and, if possible, have the benefit of the morning sun. It should never be kept in a close, hot room, and sudden changes of atmosphere, especially from heat to cold, should be sedulously guarded against.

HOW TO CULTIVATE THE HYACINTH IN PREPARED COCOA-FIBRE AND CHARCOAL.

This preparation completely supersedes water, moss, and sand, in all the elegant contrivances suggested for flowering bulbs to adorn the sitting-room and drawing-room.

We recommend its use in Hyacinth glasses, fancy flower-pots, vases, jardinetts, &c., where the drainage is imperfect. The preparation is free from impurities, and possesses a gentle stimulus; the bulbs root freely into it, and produce much finer spikes of bloom than when cultivated in sand, moss, or water. Another important recommendation our prepared cocoa-fibre and charcoal possesses is its retention of moisture for a long time. Unless in a very hot room, two or three good waterings will be sufficient from the time of planting till the bulbs are in bloom, so that the amateur is relieved from the daily anxiety lest his favourite group of forthcoming flowers should suffer from want of water.

Place at the bottom of the jardinet, &c., a handful or so of rough charcoal, and fill up with the preparation; plant the Hyacinths thickly, associating with them Snowdrops, Scilla Siberica, early-flowering Tulips, Narcissus Bulbocodium, free-flowering Crocus, and, if the space will admit, a few Pompon Hyacinths; cover the bulbs with the preparation, and neatly cover the surface with nice green carpet moss: the freshness of the moss will be prolonged by occasionally damping it with a wet sponge. Sprinkle the plants overhead with tepid water two or three times a week.

STANDEN'S GARDENERS' AND AMATEURS' FRIEND, A HIGHLY CONCENTRATED MANURE.

The richest fertilising compound known: the ingredients being chemically fixed, the Manure may be freely used in the Conservatory and other Plant Houses frequented by ladies, where disagreeable smelling manures could not be used.

Mr. CHARLES TURNER, of the Royal Nurseries, Slough, one of the most eminent and successful cultivators of Azaleas, Camellias, &c., has used THE GARDENERS' AND AMATEURS' FRIEND with the greatest success to these and other plants. Mr. JOHN DAVENPORT, late of Buile Hill, Pendleton, well known as one of the most successful fruit growers, states in his testimonial, that he found THE GARDENERS' AND AMATEURS' FRIEND superior for Fruit Trees in pots to any other form of manure he had ever tried. Mr. JOHN SMITH, late of Abney Hall, near Manchester, a most enthusiastic and successful plant grower, has for years used THE GARDENERS' AND AMATEURS' FRIEND for Azaleas, Camellias, Ixoras, and most Stove and Green-house Plants, with results which fairly surprised him. Mr. YOUNG, West Hill House Gardens, Highgate, used this manure to Pot Vines, Foliage Plants, &c., also Cauliflower, Onions, Celery, &c., and the results have been highly satisfactory.

Were it necessary further, by means of names, to establish the high reputation of this Manure, we could quote a host of well-known Cultivators, who are using it with the greatest advantage.

As this Manure only requires to be sprinkled upon the surface of the soil in a dry state, and but a little of it is necessary, the saving of labour in its application as compared with the time and labour which would be required to apply manure water in sufficient quantity to produce anything like a similar result, is as ten times the cost of THE GARDENERS' AND AMATEURS' FRIEND.

THE GARDENERS' AND AMATEURS' FRIEND, No. 1, should be used for most kinds of Hard Wooded, Stove, and Greenhouse Plants, Roses, Fruit Trees, and Vegetables. Sold in 1/ and 2/6 Sample Canisters; and in Bags, 5/6, 10/6, and 21/.

THE GARDENERS' AND AMATEURS' FRIEND, No. 2, is suitable for all kinds of Soft Wooded, Stove, and Greenhouse Plants, Annuals, Bulbs, &c. Sold in Sample Canisters, 1/ and 2/6; and in Bags, 5/6 and 21/.

STANDEN'S DEODORIZING COMPOUND, valuable for Neutralising all Offensive Odours arising from whatever cause; also, for fixing Ammonia, &c. Sold in 1/ and 2/6 Canisters.

THE PAXTON FUMIGATOR. Price 12/6.

Illustrated in Spring Catalogue.

HYACINTHS.

The varieties thus * distinguished are single; their flower trusses are generally characterised by being large, compact, and handsome, composed of a multitude of bells closely set on the stem, each bell having but one circle of petals.

Those indicated thus † are double; the flower spikes are not generally so large and compact as those of the single varieties, but are more massive in appearance; each bell consists of several circles of petals.

PAXTONIAN SECTION OF HYACINTHS, IN DISTINCT COLOURS.

THE FOLLOWING MODERATE PRICED HYACINTHS ARE THE BEST ADAPTED FOR GROUPING, MASSING, BEDDING, RIBBONING, RUSTIC BASKETS ON LAWNS, FLOWER BOXES, VASES, &c.

In giving Orders the Marginal Numbers will be sufficient, but the date of the Catalogue must invariably be specified.

POMPON, OR MINIATURE HYACINTHS.

The Hyacinths we have enumerated under this heading are dwarf in their growth, producing neat compact spikes of bloom, and may be grown in very small glasses, or small fancy pots; also in masses of from six to eighteen in old china, crystal dishes, jardinetts, and any other elegant contrivance for the drawing-room; they may also be associated with Scilla Siberica, Crocus, Snowdrops, Tulips, Narcissus Bulbocodium, and other bulbs. In such articles they will be found to succeed best in "our Prepared Cocoa Fibre and Charcoal," and the surface covered with nice green carpet moss, or Lycopodium denticulatum.

105 Early Flowering Dwarf White Roman Hyacinths; these, if planted early in September, and gently forced, will be in bloom in November; they should be grown in groups of from 3 to 12, in 4 to 7 inch pots; 25s. per 100; 3s. 6d. per dozen.

NAMED HYACINTHS FOR GLASS OR POT CULTURE IN-DOORS.

THE * INDICATES THE VARIETIES WHICH ARE BEST ADAPTED FOR GROWING IN THE NUMEROUS ELEGANT CONTRIVANCES FOR THE CULTURE OF THE HYACINTH; THEY ARE ALSO THE BEST ADAPTED FOR VERY EARLY FORCING.

THE † DENOTES THE DOUBLE VARIETIES; THESE SUCCEED ADMIRABLY WHEN CULTIVATED IN THE OPEN GROUND OR IN POTS, BUT CANNOT BE RECOMMENDED FOR EARLY FORCING, OR FOR ANY OF THE MANY ARTIFICIAL MODES OF CULTIVATING THIS FAVOURITE FLOWER.

THE MOST SUITABLE VARIETIES FOR EXHIBITION PURPOSES ARE MARKED "EX."

In confirmation of the opinion we have annually expressed of the general superiority of single over double Hyacinths, we may state that the finest varieties exhibited last Spring at both the Metropolitan and Provincial Flower Shows were single; it is therefore our practice, when the selection is left to us, and the bulbs are to be grown in glasses, jardinetts, and the like, to send single varieties only, but if they are required for pot culture, we send both single and double.

EX. In accordance with our annual custom we have again rejected from our list several inferior kinds, and replaced them with varieties, the superior excellence of which has been established beyond doubt.

OUR OWN SELECTION OF HYACINTHS FROM THE FOLLOWING SPLENDID COLLECTION,

Embracing only such varieties as we know to be most worthy the attention of amateurs.

POLYANTHUS NARCISSUS.

Easily cultivated, deliciously fragrant, and valuable to associate with the Hyacinth for winter and spring blooming.

CULTURE IN-DOORS is similar to that recommended for the Hyacinth. The bulbs being large, we recommend one for a five-inch, three for a six-inch, and six for an eight-inch pot.

CULTURE OUT OF DOORS is exactly the same as that of the Hyacinth, except that the crown of the bulb should be five inches under the surface.

Time of planting and purchasing is the same as that recommended for the Hyacinth.

The Paper White and Double Roman are the best for early flowering. If potted early and gently forced, these may be had in bloom before Christmas.

GARDEN NARCISSUS.

Showy Spring flowering bulbs, which occupy an important position in mixed borders. They grow freely in almost any soil, and are very effective planted in marginal lines, and grouped in shrubberies and woodland walks. N. Bulbocodium and N. Nanus make pretty edgings and excellent pot plants.

JONQUIL NARCISSUS.

These are graceful and pretty, and are much prized for their fragrance. They are valuable for the decoration of the conservatory, sitting-room, and flower garden, and require the same cultural treatment as Polyanthus Narcissus, except that three or four roots should be planted in a four or five-inch, and five or six in a six-inch pot, and should not be forced till the turn of the year.

THE TULIP.

EARLY TULIPS.

For Winter and Spring gardening, Early Flowering Tulips, double and single, are indispensable, and whether grown in pots, ornamental vases, jardinetts, &c., for in-door decoration, in flower boxes, rustic vases, or in the open ground, their brilliant and diversified colours produce a pleasing and striking effect. Their extreme hardiness, certainty of blooming, and the absence of all difficulty in their cultivation, distinctly entitle them to a preference in the choice of occupants for the Spring flower garden, while their cheapness enables every lover of a flower garden to plant extensively.

Those who may only have small shaded town gardens need not be afraid to plant Tulips freely; we can assure them that they succeed well even in such positions, and remain longer in bloom than if grown in situations where they would be exposed to the influence of the sun.

EARLY SINGLE TULIPS.

No Tulips display so great a variety of delicate, striking, and attractive colours as these.

CULTURE IN POTS is the same as recommended for the Hyacinth; but to produce an effective display three bulbs should be planted in a four or five-inch, and five in a six-inch pot. They should be grown close to the glass, and during fine days have abundance of air. Those intended for early blooming should be gently forced as soon as the shoot appears.

CULTURE OUT OF DOORS precisely that of the Hyacinth, planting the bulbs four to six inches apart, and keeping the crown of the bulb three inches under the surface; during severe weather protect with a thin coating of litter or cocoa fibre.

TIME OF PLANTING FOR OUT-DOOR DECORATION.—The early part of November, or as soon after as convenient. We have planted the Tulip as late as January, and have had a splendid display.

For additional varieties, see Paxtonian Section, page 13.

EARLY DOUBLE TULIPS.

The leading features in these are their massive forms, brilliant, diversified, and beautiful colours; admirably adapting them for beds on the lawn, terrace, or flower garden, and for edgings to Rhododendrons, Azaleas, and Roses, and for planting in the flower and shrubbery borders in groups of three or more.

CULTURE IN POTS, and other elegant contrivances to adorn the drawing-room and conservatory, is the same in every respect as for the Early Single Tulip; the best for such being indicated with a *.

CULTURE OUT OF DOORS.—Same as recommended for the Single Varieties.

LATE-FLOWERING SINGLE TULIP.

This Tulip is, perhaps, the most generally known. It grows taller and blooms in May. Amateurs cultivate it for the individual beauty of the flower, but it is also very effective for decorative purposes.

	Per 100.			Per doz.				Per 100.			Per doz.

PARROT TULIPS.

The Parrot Tulip has a singularly picturesque appearance; the flowers are large and the colours brilliant, so that when planted in flower borders, and the front of shrubberies, they produce a most striking effect. When grown in hanging baskets, and so planted as to cause their large gay flowers to droop over the side, the effect is remarkable and unique.

CROCUS.

FOR in-door decoration the Crocus properly managed is very useful, and for the flower garden, shrubby borders, flower boxes, rustic vases, &c., indispensable. When used as an edging to beds two or three lines deep, or to form broad marginal lines in distinct colours, or in various colours blended, the effect is remarkably fine, while the season at which they bloom adds greatly to their value. We have seen long broad bands of golden yellow, of pure white, and of deep purple Crocus, also fancy designs, and groups and masses containing from 10 to 1,000 bulbs, expand with such effect in the mid-day sun, as to elicit the greatest admiration. The bulbs being so exceedingly cheap it is surprising they are not more extensively cultivated in flower gardens, shrubberies, and lawns.

CULTURE IN-DOORS.—It is absolutely necessary to ensure success that they are well supplied with water, kept close to the glass, and have abundance of fresh air.

CULTURE IN THE OPEN GROUND.—They may be grown in almost any soil and situation. Plant three inches deep, and not more than two inches apart. The depredations of mice on the Crocus may be prevented by placing pieces of the Crown Imperial bulb near where the roots are planted.

BULBOCODIUM.

619 Vernum, best known as the *Red Crocus*; blooms about a fortnight before the ordinary *Crocus*, and, like it, may be cultivated in-doors. *Purple red* . . per 100, 10s. 6d. . . per doz. 1s. 6d.

SNOWDROP.

The effect of the *Snowdrop* is very greatly enhanced by planting thickly either in lines three to six bulbs deep, or in large masses, in situations where they can remain undisturbed for years; the best positions being close to the edges of beds, flower and shrubbery borders, and on grass lawns. In the latter place they can be planted by simply making holes in the turf five inches deep with a dibber, dropping in two inches of fresh soil, then three bulbs, and filling up with soil, keeping the holes about three inches apart. They may also be planted in lines, figures, or any other way which fancy may dictate; but to be at all effective for the first few years after planting, the bulbs must be put in thickly, and to this the price can be no impediment.

VARIOUS IRIS.

The following species are so remarkably beautiful, that we commend them to the special notice of every lover of flowers. Pavonia and Persica are fine for pot culture: three roots in a five-inch pot.

	Per doz.—s.	d.
654 Pavonia Major, pure white, each petal blotched with bright blue, beautiful	2	0
655 Persica, white, blue, purple, and yellow, a fine pot plant for early forcing, fragrant as a violet; in bloom out of doors in April	2	0
656 Susiana, blush, tinted brown, and netted with dark lines, very distinct and handsome	0	9

THE GLADIOLI.

This grand Genus may be divided into two really important sections—Summer and Autumn blooming; Ramosus and its seedlings flowering in July and August; Gandavensis and its seedlings blooming in August, September, and October. As a cut flower for filling vases, &c., the Gladiolus is unsurpassed; a flower-spike cut as it is coming into blossom will continue to develop its flowers in water, and last as long as if it had not been cut.

EARLY-FLOWERING GLADIOLI VARIETIES OF RAMOSUS.

CULTURE OUT OF DOORS.—Plant for succession in December, January, February, and March. Should the soil be well drained, it will simply require deep digging and well working, adding as the work proceeds plenty of thoroughly rotted manure; should it be wet, or of an adhesive character, besides deep digging and well working it must be thoroughly drained. Plant the bulbs four inches deep, and, if grown in clumps, six inches apart; but if grown in beds or lines, they ought to be planted six inches apart in the lines and the lines eighteen inches asunder. The first plantings should be protected by a few inches of stable litter, or, where it can be obtained, cocoa-fibre, which is the cleanest and best article for this purpose. If these are required for in-door decoration, the bulbs may be grown in the reserve garden, and when coming into bloom lifted, potted, and placed in the greenhouse or conservatory. So treated they will bloom as well as if they had been grown in pots.

TIME OF PURCHASING THE VARIETIES OF RAMOSUS.—The roots arrive from Holland the latter part of October, and as soon after that time as possible they should be procured, and kept in a dry place.

THE PAXTONIAN SECTION OF EARLY-FLOWERING GLADIOLI,

For bedding, massing, &c., consists of cheap free-flowering sorts, with rich and strikingly beautiful colours, such as would be conspicuous in centres of large beds, flower borders, amongst Rhododendrons, Azaleas, &c.

OUR OWN SELECTION, READY TO SEND OUT END OF OCTOBER.

PAXTONIAN SECTION OF AUTUMN FLOWERING GLADIOLI (Var. Gandavensis).

The demand for these being great, to prevent disappointment early orders are particularly requested.

The varieties enumerated under this heading are stately in growth, brilliant in colour, and planted in intervening spaces amongst evergreens, in lines in the front of shrubberies, or rising from amidst the foliage of American plants, or in beds, or almost any situation, they produce a magnificent display. The colours range from white to rose, from rose to deep crimson, and from crimson to bright orange, flame, and scarlet.

CULTURE.—The same as recommended for the Ramosus section.

TIME OF PLANTING.—On light well-drained soils the bulbs may be planted in March; but on stiff soils, and such as are somewhat retentive of moisture, the middle of April will be early enough.

TIME OF PURCHASING.—The bulbs arrive from France about the beginning of December, and should be procured as soon after that time as possible, and kept in a dry cool situation till wanted.

IXIAS, SPARAXIS, TRITONIAS, AND BABIANAS.

UNDER GLASS THEY FLOWER IN MARCH AND APRIL, OUT OF DOORS IN MAY AND JUNE.

THESE are amongst the most graceful, attractive, and beautiful of Cape flowering bulbs. They differ considerably in style and habit of growth, but, being closely allied, they require the same cultural treatment.

FOR IN-DOORS. Plant in October or November five or six bulbs, in a five-inch pot, using a compost of turfy-loam, peat, or leaf mould mixed with clean sand. Make the soil moderately firm about the bulbs, then place them in a cold pit or frame, plunging the pots in ashes or cocoa-fibre, and withhold water till the plants appear, then give sparingly at first. The lights should not be kept on except during wet or frosty weather.

FOR OUT OF DOORS. Choose a light loamy soil with a due south aspect (the hotter the situation the better), and if possible backed by a wall or greenhouse. Plant the bulbs six inches deep and four inches apart, surrounding them with an inch of sand. Two or three inches of dry leaves laid on the surface will be sufficient winter protection.

There are but few situations in this country where these plants succeed well entirely out of doors. No one need, however, be deprived of a bed of these superb flowers, if they will only plant three bulbs in a four-inch pot; treat as recommended for in-door culture; then in April or May remove them from the frame, and plunge the pots where intended to bloom.

IXIAS.

THE LILY (*Lilium*).

The *Lilium* is as well adapted for the ornamentation of the conservatory, sitting-room, and verandah, as it is for flower-beds and borders; some of the varieties, however, are more desirable than others for in-door culture, and these we have indicated with a *. The height of each is given in feet.

FOR IN-DOORS.—Use a good mellow soil, composed of equal parts of leaf-mould and loam, with a little peat if at hand, and one-sixth part of silver sand. A twelve-inch pot with six strong bulbs of *Lilium lancifolium* planted in it will furnish a specimen of no ordinary beauty. *Lilium auratum* (the Queen of Lilies) seems to thrive best by being kept in smaller pots than are suitable for the other varieties. It is one of the most gorgeously beautiful and deliciously fragrant plants in cultivation, and it is so accommodating in its habits, that any one possessing a greenhouse, however small, may grow it with the greatest success.

FOR OUT OF DOORS.—A light or medium soil is best. Plant the bulbs five inches deep, and for the first winter place on the surface a few dry leaves.

OUR OWN SELECTION.

Lauralum and *L. Candidum* ready to send out at once, all the other varieties in October.

THE ANEMONE.

Amongst the diversified forms of floral beauty which enrich the flower garden, from the first opening blossoms of Spring to the last rose of Summer, the Anemone takes a very prominent place, possessing many points of interest and special characteristics of colour. Its blossoms are of the most dazzling hues of scarlet, purple, and blue, self coloured and striped. The foliage is elegantly serrated, and the growth is neat and compact, so that in beds, groups, ribbons, or as an edging to Tulip or Hyacinth beds, arranged either in distinct colours or mixed, they produce a unique effect.

The flowers of the Double Anemone are extremely handsome; they have outer guard petals, resembling a semi-double Hollyhock. If planted from October to December they will bloom in succession during the early Spring months, while those planted in February and March will bloom from April to June.

The Single Anemone (*Wind Flower*), with its beautiful poppy-like blossoms, may be had in bloom at pleasure (*weather permitting*) from February to December, and, in sheltered nooks, even in January, by simply arranging the time of planting.

CULTURE.—The Anemone delights in a light rich loamy soil, but generally succeeds in any which is well drained. Sea-sand, or a little salt mixed with the soil, is a good preventive of mildew; in other respects, the culture and after management should be precisely the same as that of the Ranunculus.

PAXTONIAN SECTION OF THE DOUBLE ANEMONE.

The varieties in this section have been selected for their large flowers, rich, beautiful, and diversified colours, and will be found well suited for the purposes of massing, edging, and ribboning, for which the Anemone is so admirably adapted.

ACHIMENES.

A genus of truly splendid plants, succeeding equally well in pots, pans, and hanging-baskets; combining with great individual beauty a variety of rich and brilliant colours rarely to be met with.

CULTURE.—Use a compost of peat, loam, and leaf-soil. Plant the tubers 1½ inches apart in the pot, pan, or hanging basket, in which they are to be bloomed, and cover them with about an inch of the compost. To keep up a succession, commence starting them in heat in January, and as one lot is taken out another should be put in, till May.

SCILLA AND MUSCARI.

S. *Amœna* and S. *Siberica*, are of the most lovely azure blue, growing three inches high, and flowering as they do in March, make exquisite pot plants, and associate admirably with the Snowdrop, Crocus, Hyacinth, &c., in all the elegant contrivances ingenuity can suggest for in-door decoration; as edgings to beds, &c., in the Spring flower garden, they are unique. M. *Botryoides*, also makes a pretty dwarf edging, growing three inches high. S. *Hyacinthoides*, and all the other varieties, make excellent border plants.

MISCELLANEOUS BULBS AND TUBERS.

UNDER this general heading we have classified, in alphabetical order, a great many species and varieties of general interest, one or other of which at nearly every season of the year is in itself an object of attraction. We especially recommend them to those whose taste for the cultivation of flowers extends beyond such as are merely grown for general effect.

Among them will be found sorts suitable both for pot and border culture; others, again, for rock-work or similar situations, while several of those which attain a sufficient height, as the *Tritomas*, *Arums*, &c., may judiciously be planted in connection with shrubs, or as special groups on lawns, or in flower borders.

AGAPANTHUS UMBELLATUS (AFRICAN LILY).

An exceedingly effective plant blooming in August and September, and combining with graceful foliage large handsome heads of bloom. For the decoration of the conservatory, portico, terrace, lawn, gravel walk, sub-tropical garden, or for the side of a lake or pond, the *Agapanthus* is invaluable.

ANNUALS.**DWARF ANNUALS, FROM SIX TO TWELVE INCHES HIGH.**

Many a charming bed, patch, or edging, might be made with these in spring, either assorted with bulbs or alone; by way of example, take a circular bed, divide it into six compartments, into each sow a distinct variety of *Nemophila*, and the same may be done with many of the other Dwarf Annuals.

1297	15 packets of the most beautiful and suitable dwarf annuals, for spring blooming	.	.	.	2	6

TALLER GROWING ANNUALS, FROM ONE TO TWO FEET.

These, though not suitable for dwarf edgings, or for mixing with bulbs, are invaluable for patches in the borders, and for filling unoccupied beds; while their graceful habits, brilliant colours, and profusion of bloom, impart to the flower garden a very gay appearance.

- No. 9.—RUSTIC TERRA COTTA TOOTHED PATTERN PLANT CASE ON PEDESTAL, with furnished ferns, &c., 30/ and 35/.; filled with spring-flowering bulbs, 21/ to 30/.
- No. 9.—TERRA COTTA PLANT CASE, with furnished ferns, &c., 25/., 30/., 35/., and 42/.; filled with spring-flowering bulbs, 21/ to 30/.

The Cases, when filled with plants, should, if possible, be conveyed under personal superintendence; if required to forward them by rail, we exercise every caution in packing and delivering them safely at any of the London Railway Stations, to be forwarded by passenger train at the Consignee's risk and expense. If filled with bulbs they will carry any distance safely, and are sent carriage paid, if 21/ or upwards in value. As they require to have extra packing, a small charge is made for the case.

THE DRAWING ROOM DEK AND ALBERT PLANT STANDS
 These stands are made of the finest materials and are of the most elegant design.
 They are suitable for the drawing room, library, or any other room where a plant stand is required.
